

Cédric Archambeau, Manfred Opper, Yuan Shen,  
Dan Cornford, John Shawe-Taylor

Do you know...

What a sample path is?

What a partially observed diffusion process is?

What a stochastic differential equation is?

If variational inference can be used for infinite dimensional objects?

If forcing parameters and system noise can be estimated jointly?

If there is any advantage of constructing continuous-time models?

If not, you should visit us! Poster **T52** is where the answers are!
